Stability and reliability

Audio/MIDI Device

- A hard freeze will no longer occur when a user's Audio Device Inputs/Outputs preference is set to 32 and the user manipulates AIR Filter's Cutoff parameter via a Pad or XY Macro control, when that insert effect exists on an Output Channel

Sample Edit

- Audio at the end of a sample is no longer cut off when time stretching a sample in Sample Edit

Tracks - MIDI

- When recording into a looping clip where short notes are repeated, note on/off are now recorded correctly

Channel Mixer

- MIDI channel faders have been updated cosmetically to match the other tracks

Known issues

- Loading a track created and saved in releases before version 3.1 will appear to have no audio data in clips
