

## Force 3.1.2 Firmware Update

### **Compatibility**

This is a firmware update.

### **Firmware**

This release is for Force hardware.

### **Downloading the Update**

To download the 3.1.2 Firmware Update, navigate to the Force product page and click on Downloads to find the link: <https://www.akaipro.com/force-forcexus>

For instructions on installing the update, please visit our knowledge base article <https://inmusicbrands.force.com/akaipro/s/global-search/force>

## **Stability and reliability**

### **ALS Import**

- Importing projects from Ableton Live now accounts for user's Disk Streaming setting

### **Automation**

- Automation written for XYFX's Enable parameter will now play back correctly
- Grid automation lane name field now updates correctly when changing modes

### **Arrange**

- A crash will no longer occur when selecting the Output 1/2 track header in the Arrange view

### **Macros**

- Unwanted parameters no longer arrive when copying existing macro parameters to Track FX Rack
- Track and Track FX mode macros will now populate OLEDs correctly when reloaded

### **Saving and Loading**

- Samples are no longer overwritten when saving a project without making edits

## **Known issues**

- When a clip is looping, repeatedly recording short notes over one another can cause notes' on/off states to be incorrect, resulting in longer notes being sequenced than were recorded

- When time stretching a sample in Sample Edit, a portion of the end of the audio generated is cut off
- When a user's Audio Device Inputs/Outputs preference is set to 32, a hard freeze can occur when manipulating AIR Filter's Cutoff parameter via a Pad or XY macro control, when that insert effect exists on an Output channel
