Stability and reliability

MIDI Path

- The same MIDI note can now be played from more than one controller when the note filter is enabled

Plugin Effects

- Vocal Harmonizer - Note parameter value increments made from control surface hardware are now correct

Plugin Instruments

- OPx4 - LFO Delay and Fade parameters now respond correctly to different modulation sources

Preferences

- Cancelling a software update via USB will no longer generate a popup that claims no file was found

Sample Edit

- Performance has been improved when using the touchscreen to zoom into waveforms in Track Edit and Sample Edit
- Converting slices to a drum track no longer creates multiple undo events
- Chopping a sample into a specific number of regions now makes those slices accurately

Sampler/Looper

- Assigning a sample or a resample to pad has been repaired

Step Sequence

- When adding a new parameter, the correct pad focus will be shown

Wi-Fi/Ethernet

- Units will now shut down correctly when shut down immediately after establishing a network connection

Known issues for this release

The following issues have been confirmed by Akai Professional to be present in this and previous versions of MPC firmware. We are actively working on a resolution to these issues.

- In some cases, MIDI note-off messages can be sent to the wrong MIDI channel when received from multiple sources simultaneously.
