Change History

Windows Version 1.1.3 (August 2024)

- Resolved an issue where you could not play samples from Looper > Inst in the Kit menu.

macOS Version 1.1.6 (August 2024)

- Updated to run natively on ARM and Intel macs.
- Fixes an issue where macOS Big Sur would show a blank app.
- Fixes a "mission control" bug.
- Addresses an issue where the editor would not find the external disks with newer macOS systems.
- Resolved an issue where memory usages increased dramatically over time and resulted in the computer forcing the application to be closed.
- Resolved an issue where you could not play samples from Looper > Inst in the Kit menu.

Version 1.1.2 (January 2, 2018)

- Minor bug fixes.

Version 1.1.1 (November 20, 2017)

- **Import & Export Instruments & Kits:** Easily back up and share your custom Strike instruments and entire kits.
- **Quick Instrument:** Quickly convert a single WAV file on your computer into a Strike instrument.
- **Import Samples:** Quickly import WAV files to your SD card while using the Instrument Editor (instead of having to use your computer's Explorer/Finder).
- **Audition Samples:** Audition/preview an instrument assigned to a drum or cymbal by clicking on the desired zone on the kit graphic or on the Play (▶) icon in the fields for Layer A or Layer B.
- **Drag & Drop Instruments:** Quickly load an instrument to Layer A in the Kit Editor by clicking, dragging, and releasing it over the desired zone on the kit graphic. (You can still do this directly on the Layer A field, as well.)
- **Kit Size Overview:** View the total size (in MB) of your current kit and of each instrument in that kit.
- **Strike Module Firmware v1.3 Support:** Updated for compatibility with Firmware v1.3 and content updates on your Strike module. Download the latest firmware and updater application on the product page for your Strike Kit or Strike Pro Kit (click Downloads).
- Minor bug fixes.
