

## DS1 Firmware Release Notes

**Version 1.0.1** - This update locks input/output control from the Audio Device panel (Mac), which prevents the user from lowering the device volume when using DS1 as a default device. In v1.0.0 it was possible to adjust these levels, which could lead to no audio output from Serato DJ if, the levels were not adjusted back to the defaults prior to opening Serato DJ. This update only affects Mac users.
